

CASE STUDY: Marine Energy and Wildlife

What is it?

- In 2016, Nova Installed the world's first offshore tidal array in Bluemull Sound, Shetland. This game-changing array has delivered many technical, commercial and social breakthroughs as well as economic benefits for Shetland. The array has delivered economic growth, green jobs and energy security.
- Nova has collected wildlife data before and after the installation.
- This decade-long data set has been independently assessed, showing no negative impacts on wildlife.
